Garage Door Insulation

Est. 2012

PLAIN RANGE

We're making garage door insulation simple with our brand-new Plain Range
Two great options. One unbeatable price.

Our Premium Range still offers the highest thermal performance and engineered strength. Our Plain Range delivers affordable insulation options that still help reduce heat, cold and noise in the garage.

Plain Graphite Infused Polystyrene

- ✓ Enhanced with graphite for up to 20% better thermal resistance than standard polystyrene of the same size and thickness.
- ✓ Sleek dark grey finish for a modern garage look.
- ✓ Ideal for garages with low impact and minimal wear.

Plain Construction Grade Polystyrene

- ✓ Classic white construction grade polystyrene
- ✓ Clean and classic look that brightens the inside of the garage.
- ✓ Stronger and more durable than the graphite option.

Important Note: These materials are not originally engineered for garage doors. They do not come with garage specific testing data, but have been used as insulation in walls, roofs and floors for many years. They provide reasonable performance as budget garage door insulation - helping to reduce heat, cold and outside noise. Both options are 30mm thick, lightweight, fire resistant and moisture resistant.
